

To all Beppu City citizens

Regarding the Prevention of Coronavirus Outbreaks – 3 Prevention Methods

To prevent outbreaks of coronavirus, we ask citizens to consider places and situations where the conditions in Figure 1-3 may occur, and take actions to avoid them.

Basic methods of prevention: ① washing hands often and thoroughly (for at least 20 seconds) with soap
② wearing masks in crowded places ③ eating well-balanced and nutritious meals ④ making sure you get enough sleep.

Diagram: Places with High Risk of Outbreaks (Clusters)

3 Prevention Methods

1. Improve ventilation

In poorly ventilated spaces and environments where people can talk at close range, there is a high risk of droplet infection.

Windows should be opened once every hour.

2. Avoid large gatherings of people

3. Avoid close-range conversations

(within arm's reach)

At places such as sports gyms, pleasure boats, buffet-style dinners, mahjong parlours, ski guesthouses, and enclosed event tents e.g. gazebos and marquees, there have been reports of multiple cases of infected individuals.
